

TIP OF THE WEEK

MODEL **GD655-6**
FEATURE **BLADE LIFT ACCUMULATORS**
STD/OPT **STANDARD**
SUGGESTED SETTING **APPLICATION DEPENDENT**

**L.H. Blade Lift
Accumulator**

Blade lift accumulators are equipped as standard equipment on the GD655-6. The accumulators absorb shock loads introduced into the work equipment when the moldboard comes into contact with large or immovable objects, thereby minimizing potential damage and extending component life.

The functionality of the blade lift accumulators is controlled by the Blade Accumulator Switch inside the cab.

Position A: Blade lift accumulators functional (on)

Position B: Blade lift accumulators not functional (off)

It is recommended that the blade lift accumulators be utilized in nearly all applications except finish grading. In finish grading, a firm blade position is preferred (off position).
