

# TIP OF THE WEEK

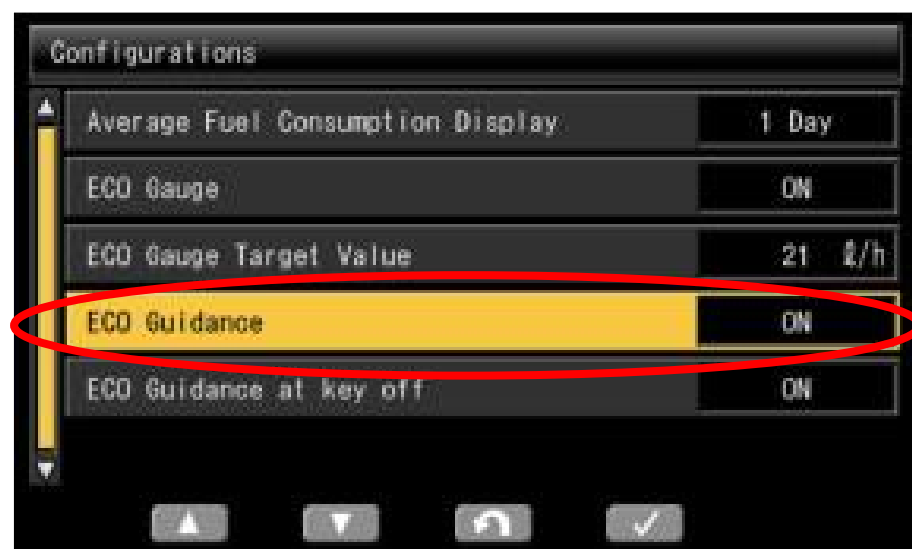

**KOMATSU**

MODEL: WA270-7 -> WA500-7

FEATURE: ECO GUIDANCE

STD/OPT: STANDARD

SUGGESTED SETTING: OFF FOR DEMOS

ECO Guidance is a standard feature on all loaders with the 7" LCD monitor panel. The idea is to help the operator reduce fuel consumption by alerting him when he is performing an action that is burning an excessive amount of fuel.

Typically these warnings are displayed when the machine goes over hydraulic relief or during long periods of engine idling.

Some operators may be confused by ECO Guidance messages.  
Consider disabling ECO Guidance during a demonstration.

ECO Guidance can be disabled in the monitor panel to avoid any confusion during a demo.
