

TIP OF THE WEEK

MODEL	All Dash 8 Loaders
FEATURE	Operator Seat
STD / OPT	Standard

The Tier 4 Final, Dash 8, loaders feature a new operator seat. This seat features air suspension, an adjustable dampener and heater for maximum operator comfort.

Seat Heater switch (1) is located near the operator's right shoulder. This switch is on the side of the backrest and now has a red LED light to indicate if the heat is on or off.

One of the best ways to help ensure operator comfort is to **adjust the dampener**. This controls how soft or firm the suspension of the seat is and will vary by operator size and preference. It is easily adjusted by moving the lever (2) up or down to achieve the desired setting.

Raising or lowering the seat can help the operator better reach the pedals, and achieve maximum visibility. This is done by pressing the up or down switch (3) located on the front left of the seat base, which inflates or deflates a pneumatic bladder until the proper height is achieved.

Sliding the seat forward or back also helps the operator feel comfortable in the loader. This is done by pulling up on the lever (4) located just to the right in the center of the seat base and sliding the seat forward or back.

For additional information, please consult the Product Bulletin, Operator's Manual or Shop Manual. Photos may include optional equipment.
