

TIP OF THE WEEK

MODEL **WA480-8, WA500-8, WA600-6/8**
FEATURE ... **Advanced Joystick Steering System (AJSS)**
STD / OPT **OPTIONAL**
SUGGESTED SETTING **N/A**

Advanced Joystick Steering System (AJSS) eliminates the steering wheel in favor of a single steering lever. This helps improve forward visibility and can increase leg room for the operator. AJSS can also help reduce operator fatigue by eliminating the repetitive motion of constantly turning the wheel.

AJSS is a position based system which allows for full machine speed. The accuracy of the joystick eliminates the need to counter-steer when completing a turn, which reduces the number of movements required by the operator.

AJSS eliminates the steering wheel, resulting in fewer motions by the operator, which should help to reduce operator fatigue while allowing the machine to operate at full travel speed.

AJSS is not compatible with the multi-function mono-lever (MFML) option.

For additional information, please consult the Product Bulletin, Operator’s Manual or Shop Manual. Photos may include optional equipment.
